Summary

Crafting software that makes a difference. I build developer tools and infrastructure, and experiment with new technologies and ideas. Currently building ZeroStarter - go from 0 to production in 15 minutes - while working on AI-powered property management at LightWork AI.

Projects

- **ZeroStarter** - Go from 0 to production in 15 minutes.
- **GitPick** - Clone exactly what you need aka straightforward project scaffolding!
- **Smart Registry** - A zero-configuration (no registry.json required), shadcn add / open in v0 compatible registry builder.
- **Karabiner Human Config** - The easiest way to write Karabiner-Elements configuration files, ever!
- **pglaunch** - Generate multiple PostgreSQL connection strings/databases using CLI for development environments!
- **Spacewall** - Spacewall is an open-source, Linktree-like website builder.
- **Awesome Templates** - Explore a curated collection of up-to-date templates for various projects and frameworks, refreshed every 8 hours.
- **Redirect.link** - Self hostable, feature rich, minimalistic and open source URL shortener.

...and many more npm packages, CLIs, VS Code extensions, and open-source repositories at zerostarter.dev/hire and github.com/nrjdalal.

Work

LightWork AI - Product Engineer

London, UK (Remote) · Jun 2025 - Present

AI-powered property management platform that automates tasks, streamlines tenant communication, and consolidates operations into a single dashboard.

- Building AI agent execution tooling with the Vercel AI SDK and OpenAI Agents SDK, and shipping core dashboard services (chat, property, and user/org management) across a TypeScript monorepo.
- Owning microservices isolation, internal CLIs, and developer-experience tooling that tighten the local-to-prod feedback loop.
- Implementing multi-tenant authentication and role-based access control covering organizations, invites, and permissioned resource access.
- Instrumenting product analytics, logging, and observability with PostHog to close the loop between feature decisions and real user behavior.

Independent - Developer Tools & Infrastructure

Oct 2023 - Present

- Author and maintainer of open-source npm packages, CLIs, and VS Code extensions with thousands of cumulative installs and GitHub stars.
- Contributor to major open-source projects including ui.shadcn.com, originui.com, and tanstack.com; tools used in production by teams at TanStack, SST, and Electric SQL.
- Delivered client engagements across website-builder, e-commerce, and SaaS domains end-to-end, from architecture to deployment.

Warewe - Senior Developer

New Delhi · Sep 2022 - Sep 2023

- Hetrolinks (SAAS) - instantly repairs broken Amazon affiliate links across affiliate blogs and websites. Engineered AWS Lambda as proxies to bypass amazon.com captcha, saving ~90% of cost vs. buying proxies. Designed an advanced scraper capable of 2,000+ pages in 5-10 minutes, finding broken affiliate links and site vulnerabilities.
- Migrated Hetrolinks backend from Python to Node.js + AWS Lambda with 50% performance improvement; implemented queue and rate-limit systems for concurrent requests.
- SerpWe (SAAS) - generates keyword ideas and organizes them into topical clusters. Built frontend, backend, and serverless APIs end-to-end, reusing improvements from Hetrolinks. Ran Puppeteer on AWS Lambda to scrape thousands of Google search results.
- Built highly performant clustering APIs (with a 5% Python child-process split for performance) and authored the complete Next.js admin dashboard using TanStack Query and Tailwind CSS.

VeroXyle - Full-Stack Developer

New Delhi · May 2020 - Aug 2022

- Delivered and maintained 10+ client-facing projects, ensuring high performance and scalability across frontend and backend.
- Automated deployment pipelines with CI/CD, reducing deployment times by 40%.
- Implemented server management scripts that cut infrastructure costs by 20%.
- Designed and developed APIs for various applications, improving development turnaround time by 30%.

SSIM Dwarka - Intern

New Delhi · Nov 2019 - Apr 2020

- Built, deployed, and managed the institute's website.

Skills

Languages: TypeScript, JavaScript, HTML, CSS, SQL, Bash

Frontend: React, Next.js, Tailwind CSS, shadcn/ui, TanStack Query, React Hook Form, SSR, SSG, SPA, PWA, State Management, Accessibility, Web Performance Optimization, Web Vitals, Responsive Design

Backend: Node.js, Bun, Hono, Hono RPC, Elysia, Express, REST APIs, GraphQL, Drizzle ORM, PostgreSQL, Redis, Better Auth, OAuth, JWT, API Design, Authentication, Authorization, Caching, Rate Limiting, Queues, CRON Jobs, Microservices, Serverless, WebSockets

AI: Vercel AI SDK, OpenAI Agents SDK, LLM Tool Calling, Agent Orchestration, Prompt Engineering, RAG, Streaming, Embeddings

DevOps: Docker, Containerization, CI/CD, GitHub Actions, Turborepo, Monorepos, Vercel, PostHog, Logging, Monitoring, Observability, Alerting, Incident Response

AWS: Lambda, API Gateway, CloudFront, CloudWatch, S3, EC2, RDS, SES, SQS, IAM, Route 53

Testing & Quality: Unit Testing, Integration Testing, E2E Testing, ESLint, Prettier, Type Safety

Education

Delhi Technical Campus (GGSIPU) - B.Tech, Electronics and Communication Engineering

Aug 2016 - Jun 2020

Kendriya Vidyalaya Andrews Ganj, New Delhi - High School (10th / 12th), CBSE

Apr 2014 - Apr 2016
