Summary

Crafting software that makes a difference. I build developer tools and infrastructure, and experiment with new technologies and ideas. Currently building ZeroStarter - go from 0 to production in 15 minutes - while working on AI-powered property management at LightWork AI.

Projects

- **ZeroStarter** - Go from 0 to production in 15 minutes.
- **GitPick** - Clone exactly what you need aka straightforward project scaffolding!
- **Smart Registry** - A zero-configuration (no registry.json required), shadcn add / open in v0 compatible registry builder.
- **Karabiner Human Config** - The easiest way to write Karabiner-Elements configuration files, ever!
- **pglaunch** - Generate multiple PostgreSQL connection strings/databases using CLI for development environments!
- **Spacewall** - Spacewall is an open-source, Linktree-like website builder.
- **Awesome Templates** - Explore a curated collection of up-to-date templates for various projects and frameworks, refreshed every 8 hours.
- **Redirect.link** - Self hostable, feature rich, minimalistic and open source URL shortener.

...and many more npm packages, CLIs, VS Code extensions, and open-source repositories at zerostarter.dev/hire and github.com/nrjdalal.

Work

LightWork AI - Product Engineer

London, UK (Remote) · Jun 2025 - Present

AI-powered property management platform that automates tasks, streamlines tenant communication, and consolidates operations into a single dashboard.

- Building AI agent execution tooling on top of the Vercel AI SDK and OpenAI Agents SDK, enabling the platform to take actions on behalf of property managers.
- Designing and shipping core dashboard services including chat, property management, and user/organization management inside a monorepo architecture.
- Owning microservices isolation, internal CLIs, and developer-experience scripts that reduce onboarding friction and tighten the local-to-prod feedback loop.

Independent - Developer Tools & Infrastructure

Oct 2023 - Present

Building and maintaining open-source developer tools and SaaS infrastructure used by thousands of developers worldwide.

- Created and maintain **ZeroStarter**, a type-safe, production-grade SaaS starter (Postgres + Drizzle, Hono RPC, Tailwind v4, Better Auth, PostHog, Docker + Vercel) that takes projects from 0 to production in 15 minutes.
- Author of a portfolio of npm packages, CLIs, and VS Code extensions (GitPick, Smart Registry, Karabiner Human Config, pglaunch, shadcn/ui snippets, and more) with a cumulative reach across thousands of installs and GitHub stars.

- Contributor to well-known open-source projects including ui.shadcn.com, originui.com, and tanstack.com; tools I've authored are used in production by teams at TanStack, SST, and Electric SQL.
- Delivered two paid engagements in the website-builder and e-commerce domains end-to-end, from architecture to deployment.

Warewe - Senior Developer

New Delhi · Sep 2022 - Sep 2023

- Hetrolinks (SAAS) - instantly repairs broken Amazon affiliate links across affiliate blogs and websites. Engineered AWS Lambda as proxies to bypass amazon.com captcha, saving ~90% of cost vs. buying proxies. Designed an advanced scraper capable of 2,000+ pages in 5-10 minutes, finding broken affiliate links and site vulnerabilities.
- Migrated Hetrolinks backend from Python to Node.js + AWS Lambda with 50% performance improvement; implemented queue and rate-limit systems for concurrent requests.
- SerpWe (SAAS) - generates keyword ideas and organizes them into topical clusters. Built frontend, backend, and serverless APIs end-to-end, reusing improvements from Hetrolinks. Ran Puppeteer on AWS Lambda to scrape thousands of Google search results.
- Built highly performant clustering APIs (with a 5% Python child-process split for performance) and authored the complete Next.js admin dashboard using TanStack Query and Tailwind CSS.

VeroXyle - Full-Stack Developer

New Delhi · May 2020 - Aug 2022

- Delivered and maintained 10+ client-facing projects, ensuring high performance and scalability across frontend and backend.
- Automated deployment pipelines with CI/CD, reducing deployment times by 40%.
- Implemented server management scripts that cut infrastructure costs by 20%.
- Designed and developed APIs for various applications, improving development turnaround time by 30%.

SSIM Dwarka - Intern

New Delhi · Nov 2019 - Apr 2020

- Built, deployed, and managed the institute's website.

Skills

Frontend: Accessibility, CSS, HTML, JavaScript, JSX, Microfrontends, Next.js, PWA, React, React Hook Form, Shadcn, SPA, SSG, SSR, State Management, Tailwind CSS, TanStack Query, TypeScript, UI/UX Design, Web Performance Optimization, Web Vitals

Backend: AI, API Design, Authentication, Authorization, Better Auth, Bun, Caching, CRON Jobs, Data Validation, Database Management, Drizzle ORM, Elysia, Encryption, Error Handling, Express, File Storage, Hono, Hono RPC, Microservices, Node, OpenAI Agents SDK, ORM, Queues, Rate Limiting, Redis, Serverless, SQL, Vercel AI SDK

DevOps: Alerting, CI/CD, Containerization, Docker, GitHub Actions, Incident Response, Logging, Monitoring, Monorepos, Pipelines, PostHog, Serverless, Turborepo, Vercel

AWS: API Gateway, Browsers on Lambda, CloudFront, CloudWatch, EC2, IAM, Lambda, RDS, Route 53, S3, SES, SQS

Education

Delhi Technical Campus (GGSIPU) - B.Tech, Electronics and Communication Engineering

Aug 2016 - Jun 2020

Kendriya Vidyalaya Andrews Ganj, New Delhi - High School (10th / 12th), CBSE

Apr 2014 - Apr 2016
